Overvoltage protection with individual components with varistors in terminal design

The metal-oxide varistors can be used in terminal design. They are approved for a maximum sine-wave-form power-frequency operating voltage, which is printed on the component. Any voltages greater than the permitted maximum are discharged safely within 25 ns. Varistors are used for medium to high power.

General ordering data

Version	Surge protection for instrumentation and control, Surge protection for measurement and control, $U_p(L/N-PE) \leq 100 \text{ V}$
Order No.	1064800000
Type	VSSC6 TRLDMOV 12VDC
GTIN (EAN)	4032248830053
Qty.	8 pc(s).

Creation date February 28, 2023 8:54:38 AM CET

Catalogue status 18.02.2023 / We reserve the right to make technical changes.

Technical data**Tender specification sheets**

Long specification	Feed-through terminal, 6.2mm wide with varistors between the two signal lines and the mounting rail potential, TS 35 contact base. Each signal path can be opened using an isolator. A signal with max. 12A can be protected here. When the terminal is fitted, a simultaneous electrically conducting contact is made between the mounting rail (earth) and the reference potential (ground) of the protection circuit in the terminal. Optical identification of the terminal based on the type of protected switching and the voltage level. The terminal can be labelled or marked.	Short specification
		Feed-through terminal with varistors (MOV) between two signal lines and mounting rail potential. Each signal path can be opened using an isolator. TS 35 contact base. Version: 12 V UC

Important note

Product information	Mode 1: State where the voltage-limiting part of the SPD was disconnected. The voltage limiting function is no longer available, but the cable is still functional.
