

Slit Couplings

Extra Super Duralumin - Clamping, Set Screw, Short For Servo Motors

■ **Features:** Due to the use of extra super Duralumin, it has high torsional rigidity and is applicable with servo motors.

🔗 For more misalignment tolerances and higher torque capacities, see Disc Type **P.1075**.

■ **For Servo Motors**

CPCX (Clamping)

CPSX (Set Screw)

*d1, d2 Identical Diameter = d1+0.5
d1, d2 Different Diameters = Large Shaft Diameter + 0.5

🔗 The lateral, angular, and axial misalignment values shown are for each occurring individually. When multiple misalignments are occurring simultaneously, the allowable maximum value of each will be reduced to 1/2.

🔗 For the selection criteria and alignment procedures, see **P.1061**.

◆ **Features of CPLCX**
Provides torsional rigidity while allowing high misalignment

Ordering Example

Part Number **CPLCX20** - Shaft Bore Dia. d1 **5** - Shaft Bore Dia. d2 **6**

Suitable for Servo Motors with high responsiveness.
Reduces centering workload as the allowable misalignment is large.
