# HARTING Cable Assemblies

People | Power | Partnership

## Transforming customer wishes into concrete solutions

The HARTING Technology Group is skilled in the fields of electrical, electronic and optical connection, transmission and networking, as well as in manufacturing, mechatronics and software creation. The Group uses these skills to develop customized solutions and products such as connectors for energy and data transmission applications including, for example, mechanical engineering, rail technology, wind energy plants, factory automation and the telecommunications sector. In addition, HARTING also produces electro-magnetic components for the automobile industry and offers solutions in the field of Enclosures and Shop Systems.

The HARTING Group currently comprises 36 subsidiary companies and worldwide distributors employing a total of approximately 3,300 staff.

### We aspire to top performance.

Connectors ensure functionality. As core elements of electrical and optical wiring, connection and infrastructure technologies, they are essential in enabling the modular construction of devices, machines and systems across a very wide range of industrial applications. Their reliability is a crucial factor guaranteeing smooth functioning in the manufacturing area, in telecommunications, applications in medical technology – in fact, connectors are at work in virtually every conceivable application area. Thanks to the consistent further development of our technologies, customers enjoy investment security and benefit from durable, long term functionality.

### Always at hand, wherever our customers may be.

Increasing industrialization is creating growing markets characterized by widely diverging demands and requirements. The search for perfection, increasingly efficient processes and reliable technologies is a common factor in all sectors across the globe.

HARTING is providing these technologies – in Europe, America and Asia. The HARTING professionals at our international subsidiaries engage in close, partnership based interaction with our customers, right from the very early product development phases, in order to realize customer demands and requirements in the best possible manner.

Our people on location form the interface to the centrally coordinated development and production departments. In this way, our customers can rely on consistently high, superior product quality – worldwide.

### Our claim: Pushing Performance.

HARTING provides more than optimally attuned components. In order to serve our customers with the best possible solutions, HARTING is able to contribute a great deal more and play a closely integrative role in the value creation process.

From ready assembled cables through to control racks or ready-to-go control desks: Our aim is to generate the maximum benefits for our customers – without compromise!

### Quality creates reliability – and warrants trust.

The HARTING brand stands for superior quality and reliability – worldwide. The standards we set are the result of consistent, stringent quality management that is subject to regular certifications and audits.

EN ISO 9001, the EU Eco-Audit and ISO 14001:2004 are key elements here. We take a proactive stance to new requirements, which is why HARTING ranks among the first companies worldwide to have obtained the new IRIS quality certificate for rail vehicles.

**HARTING technology creates added value for customers.** Technologies by HARTING are at work worldwide. HARTING's presence stands for smoothly functioning systems, powered by intelligent connectors, smart infrastructure solutions and mature network systems. In the course of many years of close, trust-based cooperation with its customers, the HARTING Technology Group has advanced to one of the worldwide leading specialists for connector technology. Extending beyond the basic functionalities demanded, we offer individual customers specific and innovative solutions. These tailored solutions deliver sustained effects, provide investment security and enable customers to achieve strong added value.

**Opting for HARTING opens up an innovative, complex world of concepts and ideas.**

In order to develop connectivity and network solutions serving an exceptionally wide range of connector applications and task scopes in a professional and cost optimized manner, HARTING not only commands the full array of conventional tools and basic technologies. Over and beyond these capabilities, HARTING is constantly harnessing and refining its broad base of knowledge and experience to create new solutions that ensure continuity at the same time. In securing this know-how lead, HARTING draws on a wealth of sources from both in-house research and the world of applications alike.

Salient examples of these sources of innovative knowledge include microstructure technologies, 3D design and construction technology, as well as high temperature

or ultrahigh frequency applications that are finding use in telecommunications or automation networks, in the automotive industry, or in industrial sensor and actuator applications, RFID and wireless technologies, in addition to packaging and housing made of plastics, aluminum or stainless steel.

**HARTING solutions extend across technology boundaries.** Drawing on the comprehensive resources of the group's technology pool, HARTING devises practical solutions for its customers. Whether this involves industrial networks for manufacturing automation, or hybrid interface solutions for wireless telecommunication infrastructures, 3D circuit carriers with microstructures, or cable assemblies for high-temperature applications in the automotive industry - HARTING technologies offer far more than components, and represent mature, comprehensive solutions attuned to individual customer requirements and wishes. The range covers ready-to-use cable configurations, completely assembled backplanes and board system carriers, as well as fully wired and tested control panels.

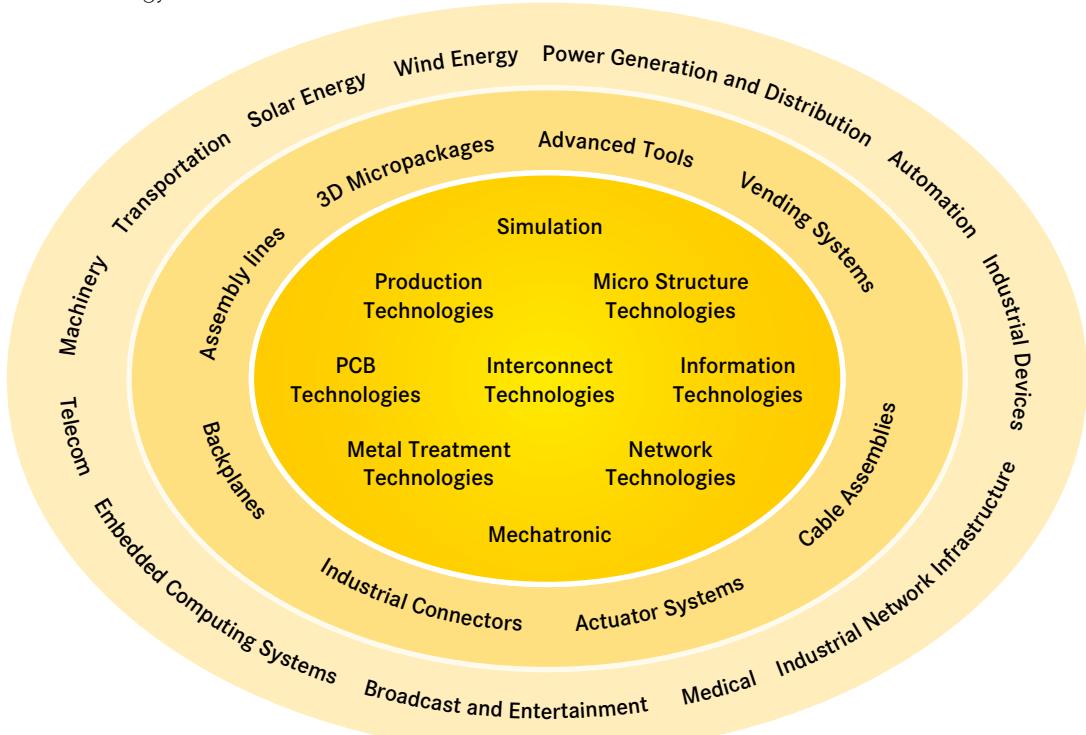

In order to ensure the future proof design of RF- and EMC-compatible interface solutions, the central HARTING laboratory (certified to EN 45001) provides simulation tools, as well as experimental, testing and diagnostics facilities all the way through to scanning electron microscopes. In the selection of materials and processes, lifecycle and environmental aspects play a key role, in addition to product and process capability considerations.

## HARTING knowledge is practical know-how generating synergy effects.

HARTING commands decades of experience with regard to the applications conditions of connectors in telecommunications, computer and network technologies and medical technologies, as well as industrial automation technologies, such as the mechanical engineering and plant engineering areas, in addition to the power generation industry or the transportation sector. HARTING is highly conversant with the specific application areas in all of these technology fields.

The key focus is on applications in every solution approach. In this context, uncompromising, superior quality is our hallmark. Every new solution found will invariably flow back into the HARTING technology pool, thereby enriching our resources. And every new solution we go on to create will draw on this wealth of resources in order to optimize each and every individual solution. In this way, HARTING is synergy in action.

# Introduction

The cabling represents the backbone of an application. Mistakes during the selection and laying of cables may lead to serious errors in data transfer, data loss and even total network failure. Especially in the demanding environments, reliable

connectors. All of them use different types of connectors like har-mik®, har-link®, HARTING PushPull, fibre optic and many more.

All HARTING cable assemblies provide an optimized electrical and mechanical support. Since these products are tested 100 % a stable quality on a high level can be assured. Without having any assembly work the application can “play” by “unpacking and plug”, so that “plug and play” becomes reality.

By covering various lengths and supporting customized solutions, including overmoulding, a wide range of applications can be served. For the overmoulding solutions we offer different materials like PVC, PUR and more. The overmoulding solution can be used with inner shielding or without. HARTING offers both standard cable assemblies and customer specific versions for small and high volumes!

and fully functional cables are an important element in planning and implementing high-performance networks ensuring a high degree of availability.

HARTING offers a wide range of cable assemblies, which are specially designed for use in different environment. Data transfer in the Categories 5, 6 and 7 according to ISO/IEC 11801 is supported.

Additionally options like solid, stranded, or trailing cable are provided. Oil resistance, high mechanical stability and halogen-free are only a few of the features HARTING demands from on its cables.

The range of HARTING cable assemblies uses these upscale cables combined with high-grade

# Chapter 01 – Indoor cable assemblies

HARTING offers cable assemblies by utilising the well-known connectors har-mik®, har-link®, D-Sub and SEK.

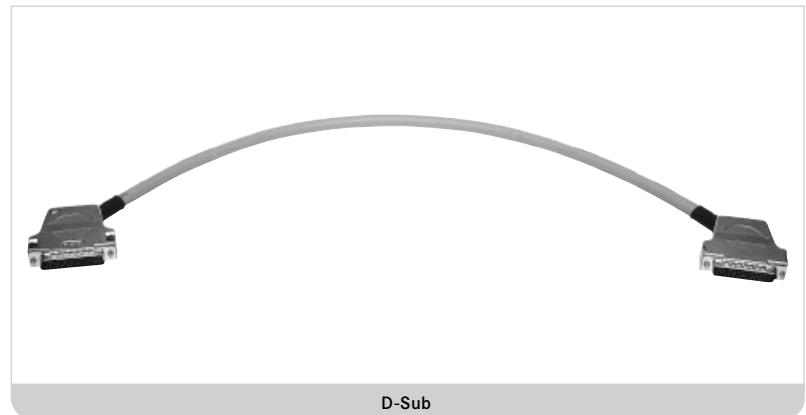

The har-link® cable assemblies have excellent data transmission properties for high speed

The time transmission test (eye pattern) shows opened eye-diagram of har-link® cable assemblies at a transmission data rate up to 100 Mbps.

HARTING offers a wide range of D-Sub contacts with perfect crimp connection.

har-link®

D-Sub

networking and telecommunications. In addition har-link® supports hot plugging as required by modern bus system such as CompactPCI, S-bus and VME.

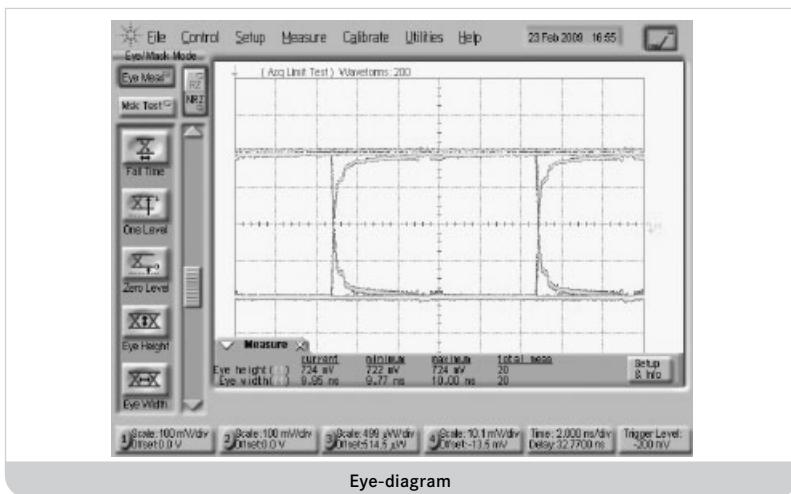

har-link® cable assemblies allow data transmission up to 2 Gbit/s per pair and are therefore perfectly suited for modern transmission protocols such as low voltage differential signals. The design of the har-link® connector allows differential pairs to be placed horizontally, thus creducing the skew at high frequencies and considering high signal integrity.

HARTING uses nickel plated D-Sub contacts. The advantage in this case is that no “Whisker creation” is guaranteed.

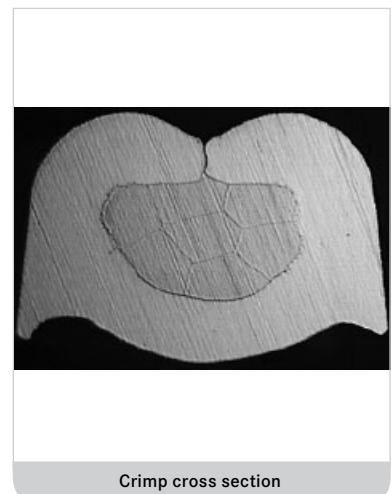

Furthermore HARTING fulfils all crimp norms (DIN/IEC 60352-2) which are important for crimp connections. Tensile strength will be tested from HARTING as well in accordance to IEC 60512.

HARTING crimp contacts are fit for different cores, AWG 20, 21, 22, 24, 26 and 28.

The HARTING portfolio covers high density versions including different polarisation as well.

## Chapter 02 – Outdoor cable assemblies

HARTING offers a wide range of cable assemblies in either copper, hybrid (power and data) or fibre optic based around its comprehensive range of I/O connectors.

These cable assemblies are manufactured using the innovative HARTING PushPull technology and the classic Han® 3 A housings with different kinds of inserts. These housings are available in either metal or plastic.

The selected materials and the special manufacturing processes allow the use of HARTING cable assemblies under such environmental conditions that are also characterized through

extreme fluctuations of temperature, high ozone levels and ultraviolet radiation.

The HARTING product portfolio offers fully assembled 100 % tested cable harnesses and removes the need for on-site assembly activity. Customer specific requirements are available on request.

The application range of HARTING cable assemblies are amongst others in telecom outdoor and wind energy. Right in the outdoor area on base stations HARTING cable assemblies are ideally suited for easier handling, transportation and reduced installation time.

## Notes

# Chapter 03 – Industrial Ethernet cable assemblies

The chapter on „cable assemblies for Industrial Ethernet“ describes a part of the complete **HARTING** product line for installing Ethernet cabling at machines, plants and production facilities in an industrial environment.

The product line includes:

- Four-wire cables for setting up flexible connections and for fixed installations
- Assembled system cables in IP 20 and IP 65 / IP 67 versions

The four-wire cabling is specially designed for Ethernet transmission of data with a max. transmission rate of 100 Mbit/s data can be reliable transmitted at either 10 Mbit/s or 100 MBit/s, with the clear assignment of the contacts of the RJ45 connector.

This complies with the following specifications:

- 10 Mbit/s Ethernet, corresponding to 10 Base-T
- 100 Mbit/s Ethernet, corresponding to 100 Base-T (Fast Ethernet)

Cabling components based on the M12 D-coding system are also a part of the four-wire cable product line, since both RJ45 and M12 connectors are common in automation engineering.

In addition to IEEE 802.3 Ethernet, the following Ethernet-based Fieldbus applications, with or without real-time functionality, can be transmitted (not a complete listing):

- PROFINET (including PROFINET RT / real-time), according to IEC 61 784-5-3
- EtherNet/IP
- Modbus / TCP
- Ethernet Powerlink
- VARAN Bus

This type of cabling is driven by the progressive implementation of various Fieldbus systems on Ethernet platforms. The special requirements placed on the cabling are often developed by manufacturing companies and user organizations. These requirements sometimes contain specific characteristics for connecting applications and networks. Withal these somewhat proprietary trends in development, there is also a movement towards international standardization, for example within the IEC SC65C committee.

The key points, particularly for the field of cabling, are established in IEC 61918. However the adoption of the ISO/IEC 24702 norm – for generic cabling in industrial buildings – ensures seamless communication between eight-wire building cabling and four-wire machinery-island cabling.

## Customized solutions

HARTING offers a wide range of cable assemblies to cover applications in different market areas. For this, there is a broad portfolio of standard products existing. Nevertheless, HARTING also offers the service of customer specific goods. With this, the high level components are integrated into a framework for ascending the value chain and give a best in class service to the customers.

Therefore, our worldwide sales force is always close to our customers in order to work out the specific needs.

For these products HARTING uses it's complete range, for example Han® or HARTING PushPull. With the usage of several connectors, there are different types, like copper, fibre optic or hybrid present, which are all served by HARTING.

Herewith, efficient processes and reliable technologies are available and will be applied for the individual applications and the referring custom-made products. Influencing factors and environmental conditions are considered here to set up the best solution for the HARTING customer.

Han-Modular®

## Customized solutions

Especially by utilising the whole Han® range, applications like wind energy, transportation or machinery are covered with high level products. Here, the long term **HARTING** experience in these fields is applied.

Power cables, data cables, hybrid and modular assemblies are the result of this combination. By arranging the various hoods and inserts and going further with the Han-Modular®, the diversity to satisfy specific needs is exceptional.

This is combined with raw cables which are designed for special needs and fulfil extraordinary demands. Together with the experience in engineering and production, this brings **HARTING** into the position to play a leading role in offering custom specific cable assemblies.

The leading role in customized cable assemblies business is well founded, because **HARTING** is using the whole range of communication channels to give best support for the customer. **HARTING** is providing solutions to make best use of customer's

HARTING PushPull metal

D-Sub mixed

benefit. One instance of interworking between tool shop, assembly shop and engineering is one customized solution called "Y-splitter". Cost and time for installation can be decreased by using cable assemblies with this overmolded Y-splitter.

PushPull cable assembly with Y- splitter
